**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1, drawn to a point storing member, classified in class 705, subclass 41.
- II. Claims 3,9 drawn to re-settable point storing member, classified in class 361, subclass 726.
- III. Claims 5,7, drawn to a method of comparing two sets of points, classified in class 705, subclass 76.

The inventions are distinct, each from the other because:

Inventions III and I,II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by hand by manually overlaying one cryptogram over the other to effect verification.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as re-settable lock for a safe. See MPEP § 806.05(d).

Art Unit: 3627

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
